IEEE 802.11 signals are designed to partially overlap! So, go ahead and use those other channels! First of all, it is important to note that the cited Cisco paper only applies to a single organisation controlling all of the IEEE 802.11 signals inside one building. It does not apply to the myriad of WiFi signals you may encounter when scanning your neighbourhood.

This answer does not address the problem, which is how do I convert all of the factor columns in my data frame to character.as.character(f), is better in both readability and efficiency to levels(f)[as.numeric(f)].If you wanted to be clever, you could use levels(f)[f] instead. Note that when converting a factor with numeric values, you do get some benefit from as.numeric(levels(f))[f] over, e ...

This is the canonical solution, with two caveats. First, you should probably be using unsigned int for mask and 1U as the left side of the shift operator, and secondly be aware that the result is unspecified if param is equal or greater than the number of bits in int (or one less than the number of bits, if you continue to use signed math). If this is a problem in your environment, use a ...
