The Ask an Expert Forum is intended to be a place where students can go to find answers to science questions that they have been unable to find using other resources. If you have specific questions about your science fair project or science fair, our team of volunteer scientists can help.

That's a Real Smile! ...or is it? | Science Project

A smile is forming on your face. The graph of a quadratic function is often referred to as a parabola with the equation $y = ax^2 + c$. The coefficient, "a," describes the direction and width of the parabola, and the constant, "c," moves the parabola up and down. Examine the picture below to see parabolas in a famous marketing symbol.

Analyzing Graphs of Quadratic Functions | Texas Gateway
Plot this point and make a little smile or frown based on your answer to #4. 6. The graph of every quadratic function is symmetric about the vertical line that goes through the vertex. This line is called the axis of symmetry. The axis of symmetry of this parabola is the vertical line :

Title: Graphing Quadratic Equations in Standard Form Class ...
It is a parabola, which looks like a smile or a frown (a rightside up or upside down U). 3. What are the critical points/features of a quadratic graph? How can you find each of them? The x-intercepts are found by setting the equation equal to zero and solving for x (this is why they are called zeros.

Quadratic Review Answer Key - Lexington
Quadratic Functions Key points about quadratic functions: All quadratic functions are of the form $f(x) = ax^2 + bx + c$ or $y = ax^2 + bx + c$ (a,b, and c are real numbers). All quadratic functions open up if a > 0, if a is positive the graph is a happy graph and the graph is a smile :)
