Test Automation Tools | Ranorex Automated Software Testing
In software testing, test automation is the use of software separate from the software being tested to control the execution of tests and the comparison of actual outcomes with predicted outcomes. Test automation can automate some repetitive but necessary tasks in a formalized testing process already in place, or perform additional testing that would be difficult to do manually.

Test automation - Wikipedia
Root Cause Analysis. It is not good enough to conduct lessons learned after the AST program has been implemented. Instead, as soon as a problem is uncovered, regardless of the phase or the type of issue - whether it's a schedule, budget, or software defect problem - a root cause analysis should be conducted, so that corrective actions and adjustments can be made.

Metrics for Implementing Automated Software Testing
