Telling that PulseAudio won't be very useful. It can already detect hotplugged devices just fine on its own; however, due to --disallow-module-loading it is no longer able to use the devices, since it's forbidden from loading module-alsa-card after a device is detected. (Arguably module-udev-detect should be exempt from this restriction...)

According to the Python os module documentation os.popen has been deprecated since Python 2.6.. I think the solution for modern Python is to use check_output() from the subprocess module. From the subprocess Python documentation:. subprocess.check_output(args, *, stdin=None, stderr=None, shell=False, universal_newlines=False) Run command with arguments and return its output as a byte string.
